## WELCOME TO 21st CENTURY STOVES!

### PRODUCT OF THE MONTH: Beee Free Natural Wasp Deterrent

We all know, with the warmer weather comes the bugs! Especially bees and wasps which can not only be a nuisance, especially if you enjoy grilling and entertaining outdoors, but can also be dangerous if you are allergic to their sting. Now there is a **NATURAL solution** to help rid your yard of these creatures without doing ANY harm to the insects! **BEEE FREE Natural Wasp Deterrent** (by SBC Firemaster Ltd.) simulates a real wasp nest, very effectively I might add. It works based on the principle that wasps are very territorial creatures and will flee an area where they find an unfamiliar nest.

The average wasps nest has about a 200 foot territorial radius. So just hang one of these up near your grill, or pool, or patio and enjoy BEEE FREE living! They even come 2 per pack! What a deal! [CLICK HERE TO BUY!](#)

### GO GREEN with WOOD: The Alternative Fuel of the Future

With the price of oil on the rise, more and more people are turning to **alternative** fuels to heat their home. Wood is a great source of energy because it is typically cheaper than gas and oil, but more importantly, it's a **renewable** source of energy. We can always plant more trees! The old fashioned wood burning fireplace is great for aesthetics, but they are terribly inefficient, sending almost all the heat created by the fire right up the chimney. Because of their inefficiency they also go through cords of wood very quickly. There is a solution! Wood burning stoves or inserts are a great way to heat your home **efficiently**, yet still enjoy the aesthetics of a wood fire. There are many wood stoves and inserts that are over 70% efficient and look great! You go through much less wood and get more heat output (BTU) per log with much longer burn times!
